community long-term maintenance
why we needed LTSI

Community maintenance : stable and long-term stable

Why we have initiated LTSI project
LTSI creation process
Why we suggest you to use LTSI
Status Update

community long-term maintenance
why we needed LTSI
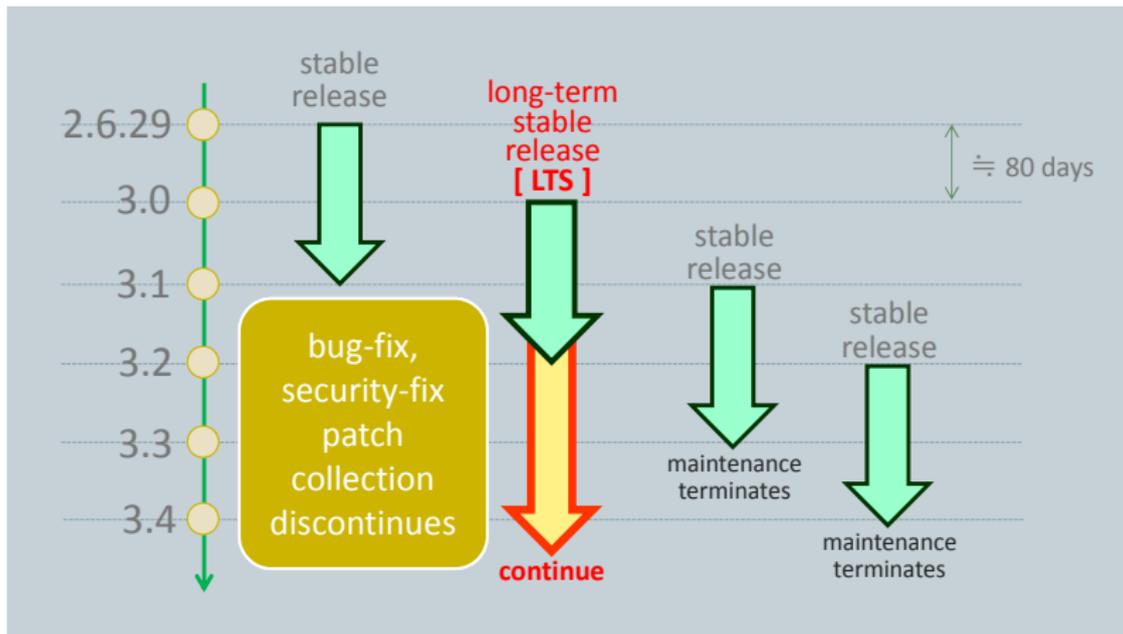

Upstream kernel maintenance expiration date

Maintenance period = accept bug-fix and/or security-fix patches. Once expired, community will discontinue such patch collection activity. If you want to keep it maintained after expiration, you need to invest someone to continue work on maintenance operation.

> regular kernel = roughly 80 days after its release
> LTS[a] kernel = normally a few year length
> _____
> [a]long term stable version kernel

Selecting LTS version kernel should be the best practice to minimize long-term kernel maintenance cost.

Why we have initiated LTSI project
LTSI creation process
Why we suggest you to use LTSI
Status Update

community long-term maintenance
why we needed LTSI

LTS kernel version selection criteria

LTS selection rules

- Bug-fix/security-fix patches must be provided to the enterprise server system for 5 years (or longer).

- Then Linux distro requested community to continue patch collection for specific version kernel.

- LTS version = 2.6.16 / 2.6.27 / 2.6.32 / 2.6.34 / 2.6.35...

New stable-kernel rule proposed by Greg Kroah-Hartman

- CE industry demand for LTS is different time-line
- select one version per year for LTS maintenance target
- keep it maintained for 2 year length after its release

Why we have initiated LTSI project
LTSI creation process
Why we suggest you to use LTSI
Status Update

community long-term maintenance
why we needed LTSI

OK, LTS seems a good choice, but...

Development speed of consumer product is relatively faster than other industry like enterprise, automotive world. This might cause delay of mainline kernel support catch up even such proposals are already submitted in upstream community.

timing gap challenge for early adoption

- Newly mainlined platform/SoC support is not available on LTS
- Newly mainlined device drivers are still missing on LTS
- Newly mainlined kernel features are still not available on LTS
- LTS kernel might not include device errata fix local patch

Then, we envisioned to create LTSI to solve these embedded industry issues as an extension of community LTS release.

Why we have initiated LTSI project
LTSI creation process
Why we suggest you to use LTSI
Status Update

community long-term maintenance
why we needed LTSI

LTS vs LTSI : What differs ?

LF/CEWG LTSI kernel

- **kernel features back-port form latest mainline**
- **device drivers back-port from latest mainline**
- **local patch (=not yet mainlined) integration**

community LTS kernel (is designed to be conservative)

- only accept bug-fix back-port
- only accept security-fix back-port

upstream kernel

- regularly migrated community kernel

Why we have initiated LTSI project
LTSI creation process
Why we suggest you to use LTSI
Status Update

community long-term maintenance
why we needed LTSI

Concept of LTSI

- Community LTS + industry demanded extra patches.
- Governed by LF/CEWG
- Focus on kernel code[a], not aiming complete BSP
- CPU architecture and platform neutral
- Can be combined with existing platform[b]
- Comply with upstream rules[c]
- Industry friendly patch collection (flexible patch forms, etc)
- Help CE (and others) industry to utilize Linux

---

[a]device drivers are part of kernel, of course
[b]Android, Tizen, Yocto, WebOS and others
[c]e.g. signed-off-by process

Who can do what for LTSI

action	membership category			
	CEWG AG voting	CEWG Corporate	CEWG Individual	Other (public)
project web access	yes	yes	yes	yes
code download	yes	yes	yes	yes
ML subscription	yes	yes	yes	yes
attend ICM[1] meeting	yes	yes		
send patch proposal	yes	yes	yes	yes
review patch by ML	yes	yes	yes	yes
discuss patch at meeting	yes	yes	yes	
vote for patch (if needed)	yes			

If you plan to adopt LTSI to your product, we recommend you to join Linux Foundation and become a CEWG/AG member to get full advantage of LTSI project.

Status Update

patch collection
validation and maintenance

Which code can be integrated to LTSI and how (1)

from upstream

- newly adopted LTS bug-fix, security-fix   (automatic)
- newly mainlined new kernel feature   (request basis)
- newly mainlined new kernel driver   (request basis)
- newly queued (to -rc version) code   (request basis)

from SoC vendor

- curved up from SoC vendor kernel tree   (request basis)
- submitted to upstream but still in review   (request basis)
- not mainlined chip workaround code   (request basis)

Why we have initiated LTSI project
LTSI creation process
Why we suggest you to use LTSI
Status Update

patch collection
validation and maintenance

Which code can be integrated to LTSI and how (2)

## from product producer, distribution

- in-house bug-fix patch   (request basis)
- private enhancement   (request basis)
    - may require strict compatibility review

Others

- not mainlined open-source project code   (request basis)
    - ideally mainline attempt history already exist.
    - LTSI project will help re-attempt action.
- LF/CEWG funded open project result   (request basis)

LTSI patch collection process

community development : mainline

maintenance (bug-fix, security-fix)
kernel 3.n-1

selected as long-term
stable target kernel

new stable
version release

maintenance (bug-fix, security-fix)
kernel 3.n

long-term maintenance (bug-fix, security-fix)

6 month

18 month

sync with LTS fixes

maintenance (bug-fix, security-fix)
kernel 3.n+1

1 LTSI adopts community LTS kernel
1 LTSI life cycle is sync with community LTS
1 LTSI has own staging process to collect patches
1 Released LTSI only reflect LTS update to keep compatibility

LTSI maintenance (reflect community LTS updates)

new LTSI staging process start

LTSI kernel
3.n release

LTSI staging process (patch collection and review)

LTSI 3.n staging tree keep open for patch collection

LTSI project management

Why we have initiated LTSI project
LTSI creation process
Why we suggest you to use LTSI
Status Update

patch collection
validation and maintenance

LTSI validation to make actual release

Once patch collection window is closed, LTSI project will provide
integrated snapshot for test that includes all approved patches.

During LTSI-staging period

- Anyone who send a patch should test your code.
- SoC vendor and distribution are expected to validate this snapshot using own reference development environment.
  - LTSI is CPU/platform neutral. You can use your environment.
  - You can publish test result like *"LTSI tested"* or *"LTSI ready"*
  - When you send a feedback, please clarify your environment (kernel config, test target spec ,reproduce procedure,..)
- If you hit any issues (bug, regression,..) please report it to ML. (We did not have dedicated BTS system like Bugzilla so far.)

LTSI 3.0 extended component

We have added over 800 extra industry demanded patches upon community 3.0 LTS-kernel to create LTSI3.0.

Extra stuff added on top of community 3.0-LTS

- patches.android
- patches.ltsi
- patches.lttng
- patches.pramfs
- patches.runtime_pm
- scripts
- patches.armadillo800eva

Conclusion

- LF/CEWG launched LTSI project to develop and distribute specially enhanced LTS kernel named LTSI for Embedded industry use. It contains some feature backport from current latest kernel, off-tree kernel patches owned by SoC vendor/product developer and others.

- We believe LTSI can dramatically reduce your own effort (=cost) for in-house kernel management. Also we hope LTSI can encourage CE company developer to send more code to upstream.

- Very first LTSI release 3.0 has released at the end of July 2012. LTSI3.0 will be maintained (at least) until 2013 June timing.

- Community maintainer decided 3.4 is the next LTS. Following this decision we started preparation for next LTSI 3.4 staging process to make LTSI3.4 release targeting ELCE2012@November.

Call for action for LTSI3.4 (targeting 2012-11 release)

For SoC vendor, CPU core provider

- Send your not-yet-mainlined (AKA vendor tree) code to LTSI
- Test LTSI kernel on your environment and feedback test result
- If any software workaround exist, please share that with us.

For product producer

- Adopt LTSI kernel to reduce your in-house maintenance cost
- If you have not-yet-mainlined bug-fix, send it to LTSI

For software distributor, integrator

- Adopt and support LTSI as your base kernel.
- Send us your feedback to improve LTSI and future upstream
